

## MapRite wins Innovation Award 2005

We are pleased to announce TENET has won the AGI Technical Special Interest Group Innovation Award 2005 for our Positional Accuracy Improvement (PAI) solution MapRite.

Presented by Ed Parsons the Chair of AGI Technical SIG "MapRite from TENET ITMapping Ltd demonstrated the application of both geometric and semantic mapping to the problem of applying Positional Accuracy Improvement (PAI) and data cleaning to land parcel data. This means that, as well as moving a land parcel, it attempts to determine the relationship of the parcel to the underlying base map.

This information is used to determine the equivalent relationship in the changed base map according to business rules. The process refines the alignment with base data.

We feel that this is the application of innovative technology to a widespread business need, allowing businesses to improve both the accuracy and quality of legacy data."

MapRite remains the leading PAI and Data Quality solution with over 50 new users in the last 12 months.

If you would like to know more about MapRite or would like a demonstration then call CDR Group on 01433 621282 or contact the sales team.
