

PB Encom's Discover 3D updated

Encom Discover and Discover 3D 2012 introduces a more accessible and intuitive 3D GIS environment for MapInfo Professional users. With its extensive range of features purpose-built for geosciences application, Encom Discover 2012 continues to unlock the power of MapInfo Professional that extends beyond geologists and geoscience professionals. Many users are now making use of the Hydrological modelling in Discover to define river catchments.

This release includes:

Visualisation and analysis of 3D vector models on drillhole cross-sections

Automatic notification of maintenance releases

New data capture and validation tools

Display and modelling of multi-banded grids, as well as a wealth of other new features and improvements

Discover 3D 2012 also includes:

New onscreen navigation controls

Users can easily display voxel models on their cross-sections for detailed 2D analysis

Point cloud datasets can be clipped to defined volumes for advanced calculations

Logical TAB file handling, and

A free Discover 3D Viewer which allows your 3D environments and models to be shared with anyone!

And more....

Get in touch with CDR to arrange a 30 day evaluation of the software for yourself.
