

Bigger, faster, stronger – MapInfo Pro v15.2

Exciting times lie ahead in the world of GIS. The latest 64-bit instalments of Pitney Bowes Software's vast suite of products have been launched, and the features are sure to impress.

New Grid Format

MapInfo Pro v15.2 is now available, and it's the most powerful edition yet. It introduces a never-before-seen grid format called Multi-Resolution Raster (MRR). This format provides lightning fast processing, visualisation and analysis of high-resolution grid data, regardless of scale and size!

Product Updates

As usual with new versions of MapInfo Pro, there are vast amounts of new features that users will find incredibly useful. These are just a few of many:

Further improvements to the Layout Designer makes for a more user-friendly interface, resulting in improved quality and productivity.

An extended TAB file format (allows for datasets to be larger than 2Gb)

Introduction of Smart Indexing vastly improves performance of common Table/Object operations. Together with performance improvements on map based querying, SQL, select filters, rendering and more.

All new support for touch-screen devices, resulting in improved usability and the capability to drive efficiency savings through enabling mobile working.

Unicode support.

MapInfo Pro Advanced

This is exciting stuff for us at CDR.

The brand new MapInfo Pro Advanced provides rapid analysis of high-resolution raster grid data at the largest scales and it handles more data than you can store! It also improves standard raster imagery handling capabilities.

Benefits

Just a few of the vast amount of advantages that come with MapInfo Pro Advanced include:

The ability to create new information from existing spatial data

The capability to perform comprehensive map display and visualisation

The improvement of understanding of spatial distributions in data.
