

NEW Data Creation Training Course added to Schedule

A new training course has been added to the CDR schedule - MI5 MapInfo Data Creation. The 1 day course aims to equip the user with all the necessary skills to carry out data capture, maintenance and manipulation tasks. Particularly useful if you are using Ordnance Survey MasterMap. The course has been designed as a result of customer feedback from the 2 day Foundation Course. Whilst the Foundation course covers data entry and drawing techniques, there are users who require a greater understanding of the many features in MapInfo that are available to aid data capture - as well as some of the hot tips and tricks. So much of GIS relies on accurate and up-to-date data - which emphasises the importance of getting the task of data capture done correctly. CDR's Projects Team has a wealth of experience in data capture operations and the new training course will be drawing on some of the real-world issues that we encounter.

The course qualifies for 4 points towards AGI Continuing Professional Development (CPD).
