

## **MapInfo Manager v1.3**

Announcing the **NEW Version of MapInfo Manager** PB Software's spatial data management solution designed to allow organisations to harvest and catalogue their metadata.

The new version incorporates a host of new and improved features and greater integration with MapInfo Professional

### **New**

- Ability to extend and customise schemas  
The ability to create and manage thumbnail images for records
- Record validation by schema
- Apply existing XML data to metadata records at capture time

Along with features such as:

- Automatically harvest geo-data from folders to populate the catalogue – using templates, MapInfo Manager will gather data about your MapInfo tables and record each one
- Harvest non-spatial data! (e.g. PDF, MS Word, Excel, etc.)
- Support for SQL Server and PostGIS databases
- Metadata Editing: New “Find and Replace” capability and in bulk mode
- More control over synchronising metadata
- Improved integration and editing with MapInfo Professional v11.5.2
- Application-level security

MapInfo Manager is fully compliant and linked to the INSPIRE directive and can be an important and major step forward toward compliance.
