

MapInfo Pro update for Microsoft Bing™ Service

The Microsoft Bing™ Imagery service that is available within MapInfo Professional is provided for customers who continue with their Annual Maintenance contracts.

As the Annual Maintenance covers new versions of MapInfo automatically, it may be expected that all customers will be on the latest version of MapInfo. However, for various reasons, some customers have yet to upgrade their installations and also still require access to the Bing™ Imagery.

Clients who are running version 10.5.3 and 11.0.x will require a patch update, as the Bing™ Imagery will not be available after 31st December 2012. CDR has communicated this to all of our clients with details of how to obtain the patch (as it is not generally available).

Don't forget that you could also upgrade to take advantage of a Premium service that includes Bing™ Roads and the Bing™ search to move your map to anywhere in the world by an address or a place name with "Move Map To" Service.

Keep a look out for another patch to MapInfo v11.5 in the New Year with new features and updates.
