

Site Centred Mapping – Real Maps

CDR Group has teamed-up with Hope Digital to provide a new service that delivers site-centred Ordnance Survey laminated maps. You can specify the location of anywhere in Great Britain to centre a customised map at a range of 4 scales to suit your own needs. Not only will it be printed to your area of interest – it will be laminated in the all-weather Aqua3™ coating. With Aqua3™ you can still fold the map without the lamination cracking, it is tearproof, it is lightweight and you can rewrite on it.

The Aqua3 Series 10, 25, 50 or 250 Ordnance Survey range puts you in the centre of your map.

Aqua3 is the first site centred map to include magnetic data provided by the British Geological Survey. If you're a keen walker, horse rider or organisation based in any outdoor activity, take a closer look. The benefits of using Aqua3 are that all maps are printed using UV inks. The papers used are synthetic so are less affected by water and over-laminated to protect the print. Available folded or flat for wall use, the choice is yours.

Scales available are:

1:10 000 10cm = 1km Full colour. Details include street and road names, brooks, rivers and generalised buildings

1:25 000 4cm = 1km The best scale for walking and navigation on foot

1:50 000 2cm = 1km A very popular OS map scale for long distance walking or cycling

1:250 000 4cm = 10km A good old fashioned road map covering a vast area in surprising detail

The Aqua3 Series also allows you to add text notes in the key section. Great for recording grid references, emergency contacts or your personal itinerary.
