

MapInfo® Pro v2019.1 Visualize data your way, right away

April sees the new release of the MapInfo Pro 2019.1 update. It is available as a trial download on the web and as a maintenance upgrade to existing customers through Digital River.

What's new in MapInfo Pro v2019.1:

Python Language Support: Python 3.7.6 x64 is installed with MapInfo Pro in the installation directory in the Python37 folder. MapInfo Pro uses the PythonNet implementation to interact with the Python environment and allow interop between .NET and Python. Multiple modules (numpy, scipy, seaborn, pandas, matplotlib, osgeo, ptvsd, mi_py_debugger) are preinstalled and can be used out of the box. Installation of additional modules is supported as well. "Run Application" MapBasic statement now supports executing *.py files.

Improvements in Select By Location Dialog: now you can specify the name of the results table, have an option to display results in a new Browser window, add results to topmost Map window, add colour override to results added to the map, find results in a Map or Browser window and execute the query without changing current selection.

Quick Search: if you are connected to internet, MapInfo Marketplace content is now searchable.

Save/Restore AddIN Ribbon Controls on QAT: Using the IRibbon.SaveRibbonState() and IRibbon.LoadRibbonState() methods, you can save or restore a control added to the ribbon to the QAT.

4K Monitor support: Improved dialog listbox scaling on 4K monitor.

Heat Maps: on the Heatmap dialog box, we have added the Select Column option to enable you to specify the column from the input table that will be used to weighting calculations on a column value.

Updates in the Raster Calculator tool: we have added more functions to the Calculator tool to support bitwise operations. These functions can be applied to unsigned integers.

Enhancements in the Raster Contour Dialog Box: we have added Match Colours to Input checkbox on the main panel of the Contour dialog box. This checkbox is used for colouring the contour lines/polygons according to the colour scheme of the input raster.

For trial users: The Evaluation Version link below is an evaluation copy with 30 days free. If you decide to purchase a license through our estore you can add your serial number and access code for the full version at the end of the trial period or any time prior.

For existing maintenance customers: Click on the Maintenance Upgrade link below and you will be directed to our estore platform to complete the checkout and download process. If you have never used the estore before, please visit the Help Guide for step-by-step instructions. You will be able to download both the new v2019 version as well as an option for downloading the sample data separately.

MapInfo Viewer: A free read-only version of MapInfo is available in v2019. This is part of the normal MapInfo installation where you can choose to install the viewer. This is available in either the Evaluation or Maintenance links below.
