

An Invitation to a Free 3-D Visualisation Seminar

Following the successful launch of Environ Planner in May 2006, the CDR Group is pleased to announce a free half day seminar in conjunction with Virtual Outlooks Ltd. detailing the use of Environ Planner and its use for 3D Town Planning and Regeneration projects. "Practical 3-D" is here!

Environ Planner is a suite of software for 3-D digital terrain modelling. South Lakeland and Barrow Councils worked in association with Virtual Outlooks Ltd, to develop this powerful application. The pilot project received match funding from the ODPM (now DCLG) from its e-innovation budget. Environ Planner is now more than just an interesting concept!

CDR Group, as specialists in Geographic Information Systems, realise that 3-D Mapping is not a new capability, especially with the abundance of digital data available today. CDR do recognise that Environ Planner offers powerful features and capabilities that make the communication of proposed developments very impressive:

- Rapid generation of buildings with height and roof styles
- Highly accurate terrain models
- Visual impact calculator
- Walk the streets or fly overhead to view the model
- Visibility wedges and camera towers
- Import GIS data and third party models

The seminar takes place on September 21st at CDR's offices in the Peak District, 1:30pm for 2:00pm start.

If you require further information, please contact the sales team on 01433 621282.
