

Getting Engaged

CDR is pleased to announce the availability of the Encom Engage 3D suite of products. Encom Technology Pty Ltd and its product range were acquired by Pitney Bowes some 15 months ago and has now filtered through to the Partner network.

Building on the many powerful features of MapInfo Professional, Engage converts MapInfo Professional into a sophisticated yet easy-to-use tool for managing, manipulating and displaying virtually any geographically related data set. The Engage product suite gives users the ability to process and view data in ways that previously required a number of software packages.

The Engage product suite encompasses three levels of functionality:

- Engage
- Engage 3D
- Engage 3D Pro

From simple timesaving additions to powerful 3D data utilities, Engage accelerates your MapInfo Professional work with an extensive range of capabilities and interactive analytical functions.
