

## Introducing MapInfo Professional® v11.5

We are delighted to announce the launch of MapInfo Professional 11.5. The official launch of MapInfo Professional in the UK took place at the MapInfo User Group Summer Conference in Birmingham on 20th June 2012. For clients on the Annual Maintenance Program, you will receive your notifications by email shortly after this date for a digital download of the new software.

The primary focus of the 11.5 release is enhanced usability. This means that the many common tasks are easier and therefore quicker to perform, requiring fewer mouse clicks. Also the quality of the output is enhanced making work look more professional. Finally there is a continuation to integrate products, such as MapInfo Manager and Stratus to give a better experience across the suite of Location Intelligence applications.

Version 11.5 introduces key customer benefits through the following capability enhancements in the area of:

More effective legend creation through the new Legend Designer

Complete faster table operations in the Browser Window through easier access to common functions plus new sort/filter capabilities.

Edit metadata direct in MapInfo Manager for up to date and accurate shared records

Ability to use multiple monitors for your work enhancing productivity

And more...
