

MapInfo Training for moving over to the 64-bit interface

Windows 7 support ends in January 2020 and we have seen a dash to upgrade users to Windows 10 recently. So isn't it time to upgrade your MapInfo to version 17?

What is holding you back? Perhaps it is the new ribbon interface and the changes that have taken place since your 32-bit version was released?

If you're not on v17, then you're already missing out on

The new Welcome screen with direct access to the Knowledge Communities

The invaluable Quick Search feature to find your favourite commands

Themes in the Layer Control (and Layout).

Enhancements to the Raster capabilities

Layout Templates, Smart Text and Smart Guides

Free credits for online Geocoding and Drivetime Regions

New 64-bit FREE ProViewer

Access to online GeoMaps (OSM) in 3 varieties

MapInfo Pro Python add-in for developer

MapInfo Marketplace preview

There are tutorials and videos online to help you but perhaps you require a bit more help. CDR has put together a one day training course for existing users to go through the new features and help you to get the most out of this much improved software. It's not just a case of finding where your favourite tools and functions have moved to - the Layout especially has a much better and easier process for producing output.

One of CDR's team can come to you and work through the new ways of working. For further details about the Training course visit this page https://www.cdrgroup.co.uk/train_mi64info.htm

We would be more than happy to help you.
