

MapInfo Training courses updated for Version 17

Our 2 day Foundation Level Training Course has now been re-written, updated and delivered for version 17 of MapInfo Pro. The latest release of MapInfo Pro is a big step in the evolution of the product as it is now fully 64-bit, offering outstanding performance and designed to make the user experience smarter and simpler to use. That's a great combination for any modern technology.

The move to 64-bit computing has been a gradual process for many customers and we can still deliver our training on the last 32-bit version 15 of MapInfo if needs be, by request. If you need to know more about the latest release of MapInfo Pro, just get in touch and our team will be happy to assist.
