

## ORDNANCE SURVEY ADDS FOUR NEW PRODUCTS TO ITS OPEN DATA PORTFOLIO

Free to use location, roads, rivers and map products from OS.

OS continues its investment in digital innovation as a means of stimulating the economy with today's release of four new exciting open data products. The products made available by OS offer users increased detail and accuracy and the opportunity for analytics.

OS Open Map – Local provides a customisable vector backdrop for users to map, visualise and fully understand their data. This new product provides the most detailed level of buildings in OS's open data suite and is designed to be used with other open data products.

OS Open Names is a reliable location search product for when you need to find something fast. It's a new, better quality, consistent index for all the location names in Great Britain. Users can search a particular location or look for somewhere in a number of ways to an accuracy of within one metre.

OS Open Rivers is a generalised open water network showing the flow and the locations of rivers, streams, lakes and canals across the whole of Great Britain.

OS Open Roads is a connected road network for Great Britain. It contains all classified roads (such as motorways and A & B roads) as well as officially named unclassified roads.
