

Spectrum Spatial Analyst 12.1 Now Available

CDR is pleased to announce the release of Spectrum® Spatial Analyst v12.1 - Pitney Bowes' Advanced Web and Mobile Mapping Solution. Organisations that have licensed Spatial Analyst may download v12.1 via the Pitney Bowes eStore. You will have received a notification with further details.

In this release, the focus is on enhancing the end users experience. The major new capabilities in this release are:

The ability to edit MapInfo Professional TAB files directly within the SSA front end.

Multi-select features from a single layer and display map information directly in the information panel.

Access the current map centre and extents within the settings menu of the end user view of SSA.

Initiate further options within the layer overflow menu including: Query, Thematic and add new record.

Show predefined Admin queries as quick search on left pane.

Enhanced record editing for multiple changes; the user now has the option to remain in feature editing mode on the same record, to keep adding more records or to submit the record and exit edit mode.

Plus several minor enhancements

Please note that as a prerequisite Spatial Analyst v12.1 requires an upgrade to Spectrum® Platform 12.1.

(December 2017)
