

The long awaited version 17 has been released today (3rd May)

Stronger, smarter and simpler because of you.

Real-world MapInfo Pro™ users have helped Pitney Bowes to create the new v17. These beta participants helped enhance, refine and validate to shape the most user-friendly, fastest and most powerful MapInfo Pro™ ever. Thanks to these collaborations, you and your organisation can find actionable geospatial insights quicker.

MapInfo Pro™ v17 features stronger performance improvements from top to bottom. With support for massive files, outstanding platform stability and award-winning raster capabilities, you can create your most powerful visualisations and spatial analytics. Plus, extreme processing speeds and a highly intuitive design help you reach business decisions sooner.

This latest release has refined and improved the layout and toolbar, making the experience smarter and simpler to use. You can now customise your toolbars to make sure your favourite tools are right where you need them and use the Quick Search window to find what you need faster.

The revamp extends to the welcome screen which gives one-click access to your most recent files as well as tips and tutorials. You'll quickly become familiar with the intuitive ribbon interface. Version 17 is sure to see you working faster and smarter.

Maintenance & Technical Support customers will shortly be received an email detailing how you can upgrade to v17.

Please get in touch for a free trial if you're not in contract but interested in upgrading.
