

This Week's Wisdom:

Understanding Ordnance Survey Copyright

Any piece of published work that uses Ordnance Survey digital map data must include an OS copyright notice. The standard acknowledgements are shown below and must be displayed in full below EACH map (even on a multi page document).

Paper and emails

© Crown copyright [and database rights] [year of supply] OS [licence number]. You are permitted to use this data solely to enable you to respond to, or interact with, the organisation that provided you with the data. You are not permitted to copy, sub-licence, distribute or sell any of this data to third parties in any form.

or

© Crown copyright [and database rights] [year of supply] OS [licence number]

if only a small extract is shown.

PDFs and Web Mapping

© Crown copyright [and database rights] [year of supply] OS [licence number]. You are granted a non-exclusive, royalty free, revocable licence solely to view the Licensed Data for non-commercial purposes for the period during which [insert name of Licensee] makes it available. You are not permitted to copy, sub-licence, distribute, sell or otherwise make available the Licensed Data to third parties in any form. Third party rights to enforce the terms of this licence shall be reserved to OS.

or

© Crown copyright [and database rights] [year of supply] OS [licence number]. Use of this data is subject to terms and conditions.

and hyperlink to the T&Cs.

NOTE: [year] should be the year you are publishing the data, not the year the data was created. [and database rights] can be removed for data that isn't stored in a database environment (raster data).

OpenData

Copyright notices must be displayed for OS OpenData products too. You should use:
Contains OS data © Crown copyright and database right (year)

If you use Code-Point Open data, you must also display the following:
Contains Royal Mail data © Royal Mail copyright and Database right [year]
Contains National Statistics data © Crown copyright and database right [year]

Derived Data

If you have derived your data from an OS source, you must still acknowledge OS using the copyright above, even if you are not displaying the original OS map. (For example, if you use OS MasterMap to plot property boundaries on a map, your new layer of data is deemed as derived data).
